

Basement Flooding Remediation and Water Quality Improvement Master Plan

Class Environmental Assessment - Study Area 45 Notice of Study Commencement

Study Overview

The City of Toronto is beginning a Class Environmental Assessment (EA) study to identify causes of flooding and develop solutions to reduce the risk of future surface and basement flooding; as well as improve stormwater quality before it is discharged to watercourses.

Study Area 45, located in the Black Creek area has experienced basement and surface flooding during extreme storms in the past. In response, the City of Toronto has initiated the EA study to address flooding that originates within the City's property (such as roads and sewer infrastructure) as well as to identify solutions for stormwater quality improvement in the area.

The Process

The study is being planned as a Master Plan in accordance with the Municipal Class Environmental Assessment process, and will result in a series of recommended basement flooding remediation and water quality improvement projects. The Master Plan will define the problem, consider and evaluate alternative solutions, assess impacts of the preferred solutions, and identify measures to lessen any adverse impacts.

Public Consultation

Two Public Drop-in Events are planned for this Study Area. The first event is expected to take place in 2018. City staff and the consulting team will be present to answer questions and discuss the next steps in the process. Notification of the events will be advertised in the local community newspaper and information mailed to residents within the study area. If you live in the study area, you will receive additional mail through Canada Post.

We would like to hear from you:

Visit the project website for more information and to take part in our online survey or contact us if you want to be placed on our mailing list for updates.
